

Vinpocetine

This drug is a revolutionary treatment (and preventative) for stroke, senile dementia and memory disturbances. Vinpocetine is a vasodilator (it improves brain blood flow with a no-steal effect) and has been found to improve hearing (tinnitus), eyesight and even alleviate the problems of menopause. Clinical research indicates that vinpocetine has a positive effect upon damaged areas of the brain, and raises brain energy levels. Vinpocetine is also known to be an antioxidant and may protect the brain from aging. There are no known side effects, toxicity or contraindications at doses of one tablet (5mg each) three times daily (or two tablets three times daily for treatments). Vinpocetine is discussed in the Summer 1998 IAS Anti-Aging Bulletin. This product is pharmaceutical quality derived from the patent holder Covex. (It is not true that all vinpocetine is from Covex - they informed us that they believe they are only supplying 80% of the US market). At high dosages, seek your physicians advice if combining with potent vasodilators such as Ginko Biloba, Hydergine, Nicergoline, Picamilone, or Xanthinol Nicotinate).

"There's no question that my tinnitus has subsided whilst using the vinpocetine, but it's more than that I do feel better." F.H.G., Texas.
